## HAOBRO

HB-QY3

### ★ PRODUCT PRINCIPLE

The traction force feedback control method is adopted to feed back the parameters input by the operator to the control system to increase and reduce the force in real time, thus realizing the longitudinal traction of the patient's cervical, the longitudinal traction or three dimensional traction, longitudinal traction/rotate traction/forming angle traction, of the patient's lumbar spine.

### ★ PRODUCT FEATURES

1. The device can be used in 8 built-in traction modes (continuous, intermittent, and repeated)
2. The device is provided with emergency protection measures
3. Automatic traction compensation function
4. Shoulder and neck heating function
5. Multi-dimensional and multifunctional traction: longitudinal
6. traction, rotary traction, and angle traction
7. Controlled by computer host, in which cases can be stored
